Earth- and Mineral Pigments

For tinting our waterbased wall paints, wall glazes, plasters and waxes:

mix pigments first with a little amount of water. Ensure that all clots are stirred out properly. Then add to the already mixed paint.

For tinting our oilbased paints, lazures, hard oils and waxes:

mix pigments first with a little amount of oil or balsamic turpentine oil. Ensure that all clots are stirred out properly. Then add to the chosen product.

All pigments are light stable, and under exception of the Ultramarine pigments, also suitable for exterior use.

This colour chart shall give a general view of our range of different colour shades. Due to the monitor adjustment considerable variations in colour will occur. The same is valid for printing this sheet.
